

Reporting Microaggressions through a Mobile App

Christy M. Byrd, PhD
University of California,
Santa Cruz

What are microaggressions?

- Microaggressions are subtle and often unintentional verbal or nonverbal slights that demean an individual based on their membership in a marginalized group (Sue, 2010).
- Examples
 - Being stared at in the dining hall
 - Someone asking to touch your hair because it is “exotic”
 - Being told you speak English well when it is your first language
 - Being mistaken for someone in a service role

What types of microaggressions are there?

- Alien in one's own land
- Ascription of intelligence
- Colorblindness
- Criminality
- Use of sexist/heterosexist language
- Denial of individual prejudice
- Myth of meritocracy
- Pathologizing cultural values/styles
- Second-class citizen
- Traditional gender role prejudice
- Sexual objectification
- Assumption of abnormality

What are the effects of experiencing microaggressions?

- Psychological effects
 - Anxiety
 - Depressive symptoms
 - Self-esteem
- Academic effects
 - Lower feelings of belonging
 - Lack of confidence in abilities
 - Poor performance

What are the limitations in the existing research literature?

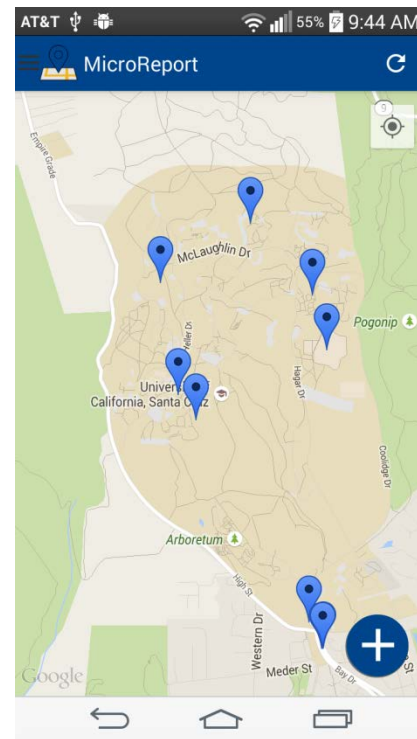

- Research relies on recall weeks or months later - may be inaccurate and underestimate impact
- Need to examine how different groups are affected differently
- Daily diary studies are expensive and fatiguing
- No existing research on intervention strategies

What are the goals of the study?

- Investigate the utility of a mobile app for reporting
- Study effects of microaggressions over time
- Test a potential intervention

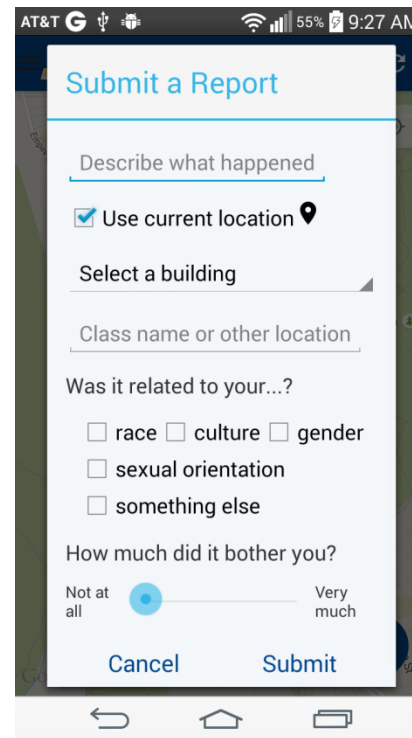

What is MicroReport?

- A mobile app for Android and iOS phones developed at UCSC
- Users can report microaggressions and view others' anonymized reports

What is the structure of the study?

- Use the app for one academic year
- 4 surveys
 - Perceptions of campus
 - Academic outcomes
 - Psychological well-being
 - Identity beliefs
- 2 workshops each quarter
 - Basics
 - Responding to microaggressions

The screenshot shows a mobile application interface titled "Submit a Report". The interface includes a text input field for "Describe what happened", a checked checkbox for "Use current location", a dropdown menu for "Select a building", and another text input field for "Class name or other location". Below these fields, there is a section titled "Was it related to your...?" with five checkboxes: "race", "culture", "gender", "sexual orientation", and "something else". At the bottom of this section, there is a slider for "How much did it bother you?" ranging from "Not at all" to "Very much". The slider is currently positioned towards the "Not at all" end. At the very bottom of the screen, there are "Cancel" and "Submit" buttons.

Workshops

Basics

- What are microaggressions?
- Themes
- Previous research

Self-Defense

- Appeal to values
- State your feelings
- Use humor
- Give information

Who are the participants? (Survey 3)

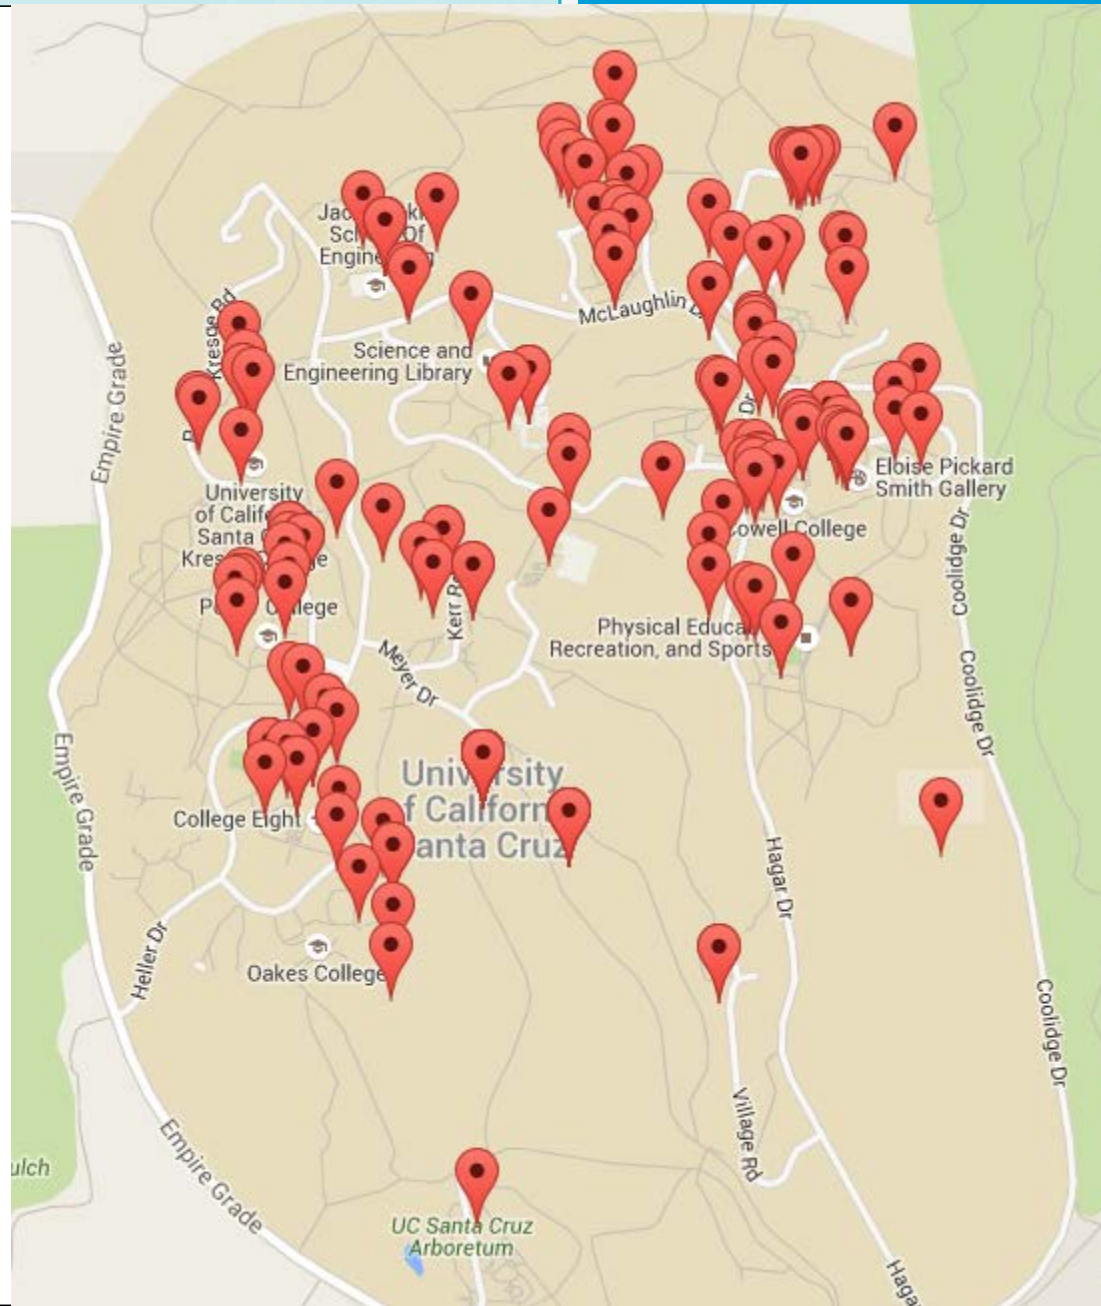

- 211 UCSC undergraduate and graduate students (70% women)
- 31% Android users, 68% iPhone users
- 18% lesbian, gay, or bisexual
- 26.5% Asian/Asian American, 5.2% Black/African American, 30.3% Hispanic/Latino, 26.1% White/European American, 8.1% Multiracial
- 57% first generation college students

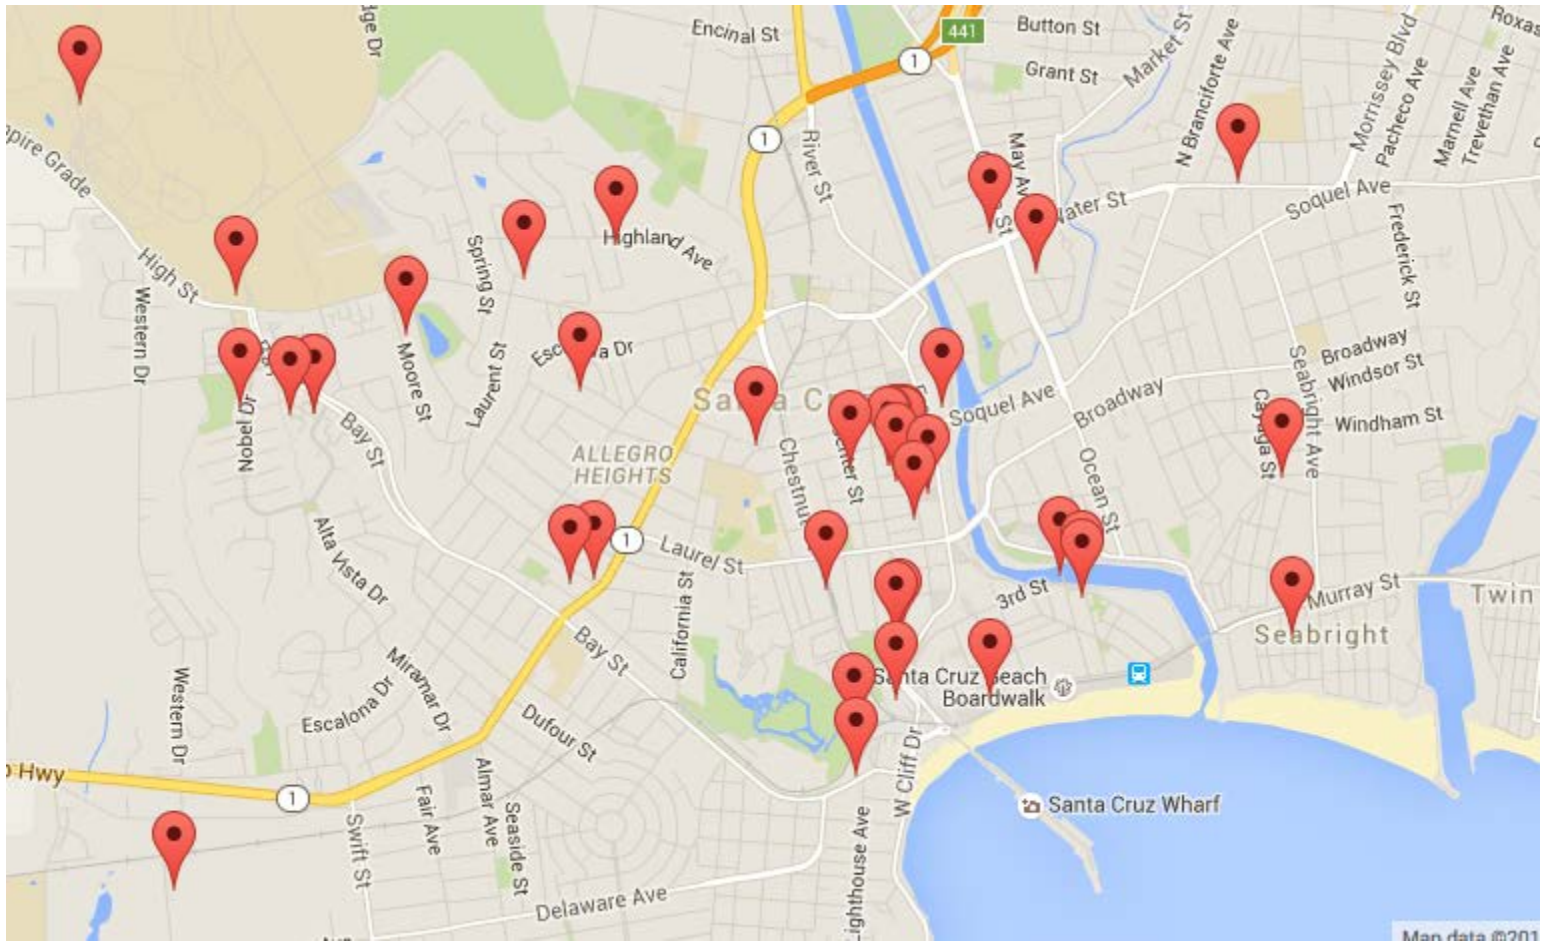

What are the measures?

- BAPC (.72)
- Basic Needs Satisfaction - Competence (.79)
- Basic Needs Satisfaction - Belonging (.82)
- College Satisfaction (.80)
- Racial-Ethnic Microaggressions Scale (.93)
- Self-reported GPA

What are the measures?

- CES-D (.74)
- Oxford Happiness Scale (.82)
- Rosenberg Self-Esteem Scale (.90)
- Perceived Stress Scale (.87)
- Coping Self-Efficacy
 - In the situation (.78)
 - Problem-focused (.90)
 - Social support (.71)
 - Stop unpleasant thoughts/feelings (.91)

Reports

- 74% have made a report
- 0-24 per person
- Mean # of reports: 1.73 (SD = 3.23)
- Mean bothered rating: 55.52 (SD = 28.41)
- Not correlated with survey measure of racial microaggressions

Longitudinal Relations for Racial Microaggressions

- Time 1 (November) to Time 3 (April)
- Belonging (ns)
- Self-esteem ($p < .001$)
- Feelings of competence ($p = .041$)
- Happiness (ns)
- Depressive symptoms ($p = .001$)
- Stress ($p = .027$)
- Controls: time 1 outcome, gender, race, social class, days between surveys

Discussion

- App usage
- Longitudinal findings
- Logistical considerations
- Next steps
